programming :

Its a process of giving instructions to the computer to perform specific task is called as programming.

Three levels of programming :

1) binary level programming

Ex: 0 and 1

2) mid / accembly level programming

3) high level programming.

Ex: C, C++, Java, python .... etc

Introduction of python :

python is High level, Intepretted, object and also indent programming language.

Features of python :

* easy to learn
* free and open source
* platform independent
* huge community support
* vast collection of libraries
* It's support all kind of programming methods.

Applications :

* web applications
* Gaming applications
* Desktop applications
* Data Analytics
* Data Science
* AI
* Automation
* IOT

History of python :

python was developed by Guido van Rossum

In 1991 : The first public Realise of python.

2000 : python 2.0 was Released.

2008 : python 3.0 was Released.

Difference between python1 and python 2 & python3.

python 1 → Introduced the language.

python 2 ⇒ It Added more features and improvements

python 3 → Improved the language and corrected earliear design issues.

Different methods of print :

1. printing a string :

```
print ("hello")
```

output : Hello

2. printing variables :

```
name = "Rama"
age = 22
print ("my name is ", name, "and my age", age)
```

output :

my name is Rama and my age is 22.

3. .format ().

```
name = "subbu"
age = 25
print ("my name is {} and my age is {} ".format (name, age))
```

output :

my name is subbu and my age is 25.
